# Animal Rubber Dairy Flooring

## High Quality at a Competitive Price

We are the UK distributor for Animat Interlock Rubber Flooring, North America's best selling dairy rubber flooring.

Produced in Canada from 100% recycled rubber, it is used by dairy farmers worldwide to cover hard, slippery concrete floors with a safe, comfortable, hygienic surface which mimics natural pasture.

## Better Comfort and Safety

The flooring absorbs shock and the textured surface is non-slip even when wet. Cows:

- Move naturally and easily
- Suffer less lameness
- Are less stressed
- Have fewer falls and injuries
- Improve locomotion scores.

## Better Hygiene

The 100% recycled rubber flooring is:

- Easy to clean and disinfect
- Non-porous so no liquid is absorbed

Adaptable to all existing cleaning systems including sluicing systems with fixed or moveable scrapers and slatted floors.

## Better Heat Detection

The natural feel and security of the rubber flooring promotes the natural behaviour of a cow in heat making it easier to identify the insemination period.

## Durable, Adaptable and Easy to Fit.

The rubber flooring is suitable for cubicle alleys, parlours, walkways and holding areas. It has:

- A 5 year manufacturers warranty
- Interlocking on 1,2,3 or 4 sides for quick and secure fitting
- A unique profile so the scraper does not run on the matting.

The matting is 18mm thick and can be driven over by tractors and feeder wagons without causing damage. It is available:

- In standard widths
- In custom sizes by special order
- For rotary milking parlours and slatted areas by special order
